## Capital risk management

The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to provide returns for shareholders, benefits for other stakeholders and to maintain an optimal capital structure to reduce the cost of capital.

In order to maintain or adjust the capital structure, the Company may adjust the amount of dividends paid to shareholders, return capital to shareholders, issue new shares or sell assets to reduce debt.

Consistent with others in the industry, the Company monitors capital on the basis of the gearing ratio. This ratio is calculated as net debt divided by total capital. Net debt is calculated as total borrowings (including the short-term part of the long-term debt and bank overdrafts as shown in the consolidated statement of financial position) less cash and cash equivalents. Total capital is calculated as equity, as shown in the consolidated statement of financial position, plus net debt.

The Company's strategy, which has not changed compared to 2016, is to target a gearing ratio between 50% and 60%. This target is subject to maintaining headroom of 20% of all banking covenants. At December 31, 2017 and 2016 all debt was held at project company level on a limited recourse basis. The gearing ratios at December 31, 2017 and 2016 were as follows:

### Capital risk management
